Professional Summary

Recent career transition from a 10-year background as a chef to software development, bringing adaptability, rapid learning ability, and strong teamwork in Agile environments. Experienced in full-stack development, API integrations, CI/CD automation, Docker, and microservices architecture. Very passionate about learning and collaborating to drive innovation in the industry.

Technical Skills

Programming Languages: JavaScript, Java, Python

Front-End: React, HTML, CSS, Tailwind, Bootstrap

Back-End: Spring Boot, Express.js, Node.js, MongoDB, PostgreSQL

DevOps & Cloud: Docker, CI/CD, AWS, Azure, Nginx, Agile, SCRUM

AI & Data: Prompt Engineer, Machine Learning Fundamentals

Work Experience

Freelance Software Developer (2024 – Present)

- Website Development for Small Businesses
 - Designed and managed secure, high-performance websites using WordPress, Elementor, and WP Engine.
 - Implemented SEO strategies, and enhanced security measures to improve site performance and visibility.
- E-Commerce Development
 - Built and customized Shopify-based e-commerce platforms, optimizing UI/UX and streamlining the checkout process.
 - Integrated payment gateways, automated inventory updates, and performance.

Sous Chef | Culinary Leadership (2015 – 2024)

- Successfully transitioned from a decade-long culinary career to software development, leveraging problem-solving, adaptability, and teamwork from high-pressure kitchen environments.

Projects

Capstone Project: Menu Master Restaurant Management System

Technologies: React, Rust, Rocket, MongoDB, Docker

Role: Front-End Developer

- Led the development of a user-friendly, responsive front-end interface with React, enabling efficient management of inventory, menus, and employee data.
- Integrated the front-end with backend APIs developed in Spring Boot, ensuring seamless data flow and robust user interactions.
- Optimized the CI/CD pipeline to reduce deployment errors by 30% and streamline the release process.

Employee Dashboard: MERN

Technologies: React, JavaScript, Express.js, MongoDB, Node.js

Role: Full-Stack Developer

- Designed and implemented a comprehensive dashboard application for managing employee data, tracking performance metrics, and processing leave requests.
- Developed and integrated robust RESTful APIs using Express.js and Node.js to enable efficient CRUD operations on employee records stored in MongoDB.
- Collaborated in an Agile environment to ensure seamless integration between the front-end and back-end, enhancing overall user experience and system reliability.

Tic-Tac-Toe AI Minimax

Technologies: Java, JavaFX, Minimax Algorithm

Role: Back-End Developer

- Developed an interactive Tic-Tac-Toe game with JavaFX, allowing users to play against either another human or an unbeatable AI utilizing the Minimax algorithm.
- Integrated a decision-tree search algorithm for optimal move selection, making AI-driven decisions efficient.

Education

Computer Programming and Analysis

George Brown College, Toronto, ON | Graduation: April 2024

- Achievements: Dean's List (All Terms)
- Relevant Coursework: Advanced Data Structures, Object-Oriented Programming, Enterprise Java Applications, Machine Learning Basics, Full-Stack Applications.

Additional Information

Continuous Learning: Currently expanding expertise in block chain development, cybersecurity, and cloud infrastructure.
