

CASEY HSU

Full-Stack Software Developer | CMS & AI Automation

Toronto, ON | 416-500-2939 | casey-hsu@outlook.com | Canadian Citizen

linkedin.com/in/casey-hsu | caseyhsu.com | github.com/SimBuds

SUMMARY

Full-stack software developer with 3+ years building production web applications, CMS platforms, and AI automation for paying clients. Sole developer and client contact on Shopify, HubSpot, WordPress, and Contentful builds, owning scoping through frontend and backend development, REST API integration, technical SEO, CI, QA, launch, and client handoff. Builds LLM content pipelines with human-in-the-loop editorial review, plus agentic tooling on the Claude API and local inference (Ollama) with FastAPI, PostgreSQL, and Docker. Advanced Diploma with Dean's List all terms, earned while delivering client work alongside a full-time culinary career. Now developing full time.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, PHP, SQL, HTML5, CSS3, Sass

Frontend Development: React, Redux, React Native, Next.js, responsive web applications, Figma design handoff

Backend & API Development: Node.js, Express, FastAPI, REST API design and integration

CMS & E-Commerce: Shopify (Liquid, custom themes, app development), HubSpot CMS (HubL, CRM configuration), WordPress (Elementor), Contentful, headless architecture, technical SEO (Core Web Vitals, PageSpeed, JSON-LD), Google Search Console / Analytics / Tag Manager

AI & Automation: Claude API, LLM integration, agentic architecture and multi-agent orchestration, local LLM hosting and inference tuning (Ollama), LLM content pipelines with human-in-the-loop review, structured JSON output, prompt engineering, Model Context Protocol (MCP), browser automation

AI-Assisted Development: Claude Code, OpenAI Codex, custom agent workflows for implementation, testing, and iteration; daily driver on all current projects

Databases & Infrastructure: PostgreSQL, MySQL, MongoDB, SQLite, Redis, Docker & Docker Compose, nginx, AWS, Azure, Linux

Version Control, CI/CD & Testing: Git, GitHub Actions, continuous integration and deployment, Jest, Playwright, automated linting, Agile/Scrum

Additional: Java, Spring Boot, Angular, Astro

PROFESSIONAL EXPERIENCE

Full-Stack Developer (Contract) | Atelier Dacko, Toronto, ON | Apr 2023 – Present

- Sole developer and client contact for a custom jewelry brand's move into e-commerce: migrated the site, catalog, URL redirects, and AWS-hosted media assets from WordPress to Shopify with no loss of search visibility.
- Built an LLM content pipeline that generates baseline product descriptions and content briefs for editorial review, then audits published output and scores it against target keywords, cutting description drafting from 30 minutes to 5 across a 200+ product catalog.
- Built and launched a 16+ page custom Shopify storefront on a customized Dawn 2.0 theme in Liquid, and redesigned the original WordPress portfolio in Elementor ahead of the migration.
- Own ongoing content operations and on-page technical SEO across the store, tracking performance through Google Search Console, Analytics, and Ads. Organic blog traffic up 30%.
- Building an interactive ring-builder configurator (stone, band, size) to replace a manual quote workflow that currently costs roughly two weeks of one-on-one consultation per custom order. In active development.

HubSpot CMS Developer (Contract) | Neurative AI, Toronto, ON / Jan 2026 – Apr 2026

- Built a custom 8-page HubSpot CMS site from Figma designs, developing reusable, editor-configurable HubL modules and page templates so the marketing team could manage content without developer involvement.
- Cut page load time 30% and raised PageSpeed scores above 90 through image optimization, lazy loading, and caching, improving Core Web Vitals and organic search performance.
- Set up a GitHub Actions continuous integration pipeline with automated linting to validate theme changes before production deploys.
- Configured HubSpot CRM roles and permissions, launched the site, and ran a month of post-launch QA through to a clean client handoff. Fixed-term contract completed on schedule.

Shopify Developer (Contract) | Geeked Out Goods, Toronto, ON / Jan 2024 – May 2024

- Built Python automation pipelines for bulk product uploads, sanitizing and schema-checking CSV inventory exports before Shopify import across a 400+ item vintage gaming catalog.
- Cut manual data entry out of catalog operations and stopped malformed feeds from reaching the live store by validating at ingest instead of after import.
- Ran ongoing inventory management and content publishing, building and launching product and landing pages across the store in the Shopify theme editor.

Sous Chef & Team Lead | JOEY Restaurant Group and independent venues, Toronto, ON / Feb 2015 – Nov 2025

- Led kitchen teams of 5–20 over ten years: hiring, training, scheduling, food-cost budgeting, and cross-functional coordination with ownership. Ran concurrently with the diploma and contract development work above from 2021 onward.

PROJECTS

Jobhunt | Deployed AI Job-Search Automation | github.com/SimBuds/Jobhunt

Stack: Python, FastAPI, Claude API, Ollama, PostgreSQL, Redis, SQLite, Playwright, Docker Compose, public ATS APIs

- Publicly deployed and in daily active use, ingesting nine public ATS APIs including Greenhouse, Lever, Ashby, and Workday, the same systems that process the majority of technical job applications.
- Agentic architecture pairing Claude API orchestration with a quantized local LLM for high-volume inference, keeping schema-constrained JSON generation stable on consumer GPU hardware while holding per-run API cost near zero.
- Enforces a structural no-fabrication guarantee: deterministic checks reject any generated claim not present in a verified source profile.
- Built and iterated through an AI-assisted development workflow using Claude Code and Codex for implementation and custom agent workflows for testing, with durable state in PostgreSQL, caching in Redis, and containerized deployment via Docker Compose.
- Running continuously for 3 months in daily use; packaged distribution build currently in development.

EDUCATION

Computer Programming & Analysis | George Brown Polytechnic, Toronto, ON | Sept 2021 – Apr 2024

Dean's List, all terms. Coursework: Machine Learning, Data Structures & Algorithms, Full-Stack Development.

Capstone: Restaurant inventory management system that automates purchase ordering from consumption history and par levels. Built in a team of four against a Rust backend; owned both front ends, React on web and React Native on mobile.

CERTIFICATIONS

Contentful Certified Professional + Personalization Skill Badge, Oct 2025. Headless CMS content modeling and delivery.
