SUMMARY

Full-stack developer (TypeScript, React, Next.js, Node.js, Python) specializing in CMS and e-commerce delivery, with 3+ years of independent contract work across Shopify, HubSpot, and WordPress — storefronts, custom themes, technical SEO, and integrations owned end to end from scoping through QA, launch, and handoff. Builds production AI automation tooling on the Claude API and local LLMs (Ollama) with FastAPI, Postgres, Redis, and Docker. Advanced Diploma in Computer Programming & Analysis (Dean's List, all terms), earned while delivering client projects alongside a full-time culinary career — now in development full time.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, Python, React (Redux, React Native), Next.js, Node.js, Express, FastAPI, HTML5, CSS3, Sass, PHP, RESTful APIs

CMS & E-Commerce: Shopify (Liquid, custom themes, app development), HubSpot CMS (HubL, CRM configuration), WordPress (Elementor), Contentful, Technical SEO (Core Web Vitals, PageSpeed, JSON-LD), Google Tag Manager

Data & DevOps: PostgreSQL, MySQL, MongoDB, Redis, Docker & Docker Compose, Git, GitHub Actions CI/CD, Jest, Playwright, nginx, AWS, Azure

AI & Automation: Claude API, agentic architecture, Ollama (local LLM hosting & tuning), prompt engineering, Claude Code, OpenAI Codex

Familiar: Java, Spring Boot, Angular, Astro, MCP (Model Context Protocol), Figma, Agile/Scrum, headless architecture

PROFESSIONAL EXPERIENCE

Atelier Dacko — Custom Jewelry Brand (ongoing client) Apr 2023 – Present

- Sole developer and client contact for the brand's move into e-commerce: redesigned the WordPress portfolio in Elementor, then migrated the site, catalog, redirects, and media assets (AWS) to Shopify.
- Built a custom 16+ page Shopify storefront on a customized Dawn 2.0 theme in Liquid, and managed ongoing content and on-page SEO across the store.
- Building an interactive ring-builder configurator (stone, band, size) that replaces the manual quote workflow — cutting roughly two weeks of one-on-one client consultations from each custom-order cycle.

Neurative AI — SEO AI Agency (fixed-term contract, completed as scheduled) Jan 2026 – Apr 2026

- Turned Figma designs into a custom 8-page HubSpot site, building reusable, editor-configurable HubL modules and page templates.
- Cut page load time 30% and lifted PageSpeed scores above 90 through image optimization, lazy loading, and caching — improving Core Web Vitals and search rankings.
- Set up GitHub Actions CI with automated linting to validate theme changes before production deploys; configured the HubSpot CRM (roles, permissions), launched the site, and ran a month of post-launch QA for a clean handoff.

Geeked Out Goods — Shopify Vintage-Gaming Store (contract) Jan 2024 – May 2024

- Built a validation pipeline that sanitized and schema-checked CSV inventory exports before Shopify import, catching malformed feeds for a 400+ item catalog before they reached production.

Sous Chef & Team Lead | JOEY Restaurant Group and other venues, Toronto Feb 2015 – Nov 2025

- Led teams of 5–20 across ten years: hiring, training, scheduling, food-cost budgeting, and cross-functional coordination with ownership — concurrent with the diploma and contract work above from 2021 onward.

TECHNICAL PROJECTS

Auto-Agent — Autonomous Desktop Automation Agent — github.com/SimBuds/Auto-Agent

Stack: FastAPI, Claude API, PostgreSQL, Redis, Docker Compose, Linux (systemd, D-Bus)

- Autonomous agent planning against the Claude API through a FastAPI capability server, with Postgres durable memory and Redis context caching, deployed 24/7 via Docker Compose and systemd.
- Docker-sandboxed containers isolate tool execution; the capability server bridges agent intents to desktop notification, clipboard, and D-Bus endpoints.

Jobhunt — Local-LLM Job Search Automation — github.com/SimBuds/Jobhunt

Stack: Python, Ollama, SQLite, Playwright, public ATS APIs

- Local-first Python CLI automating a job search end to end with a quantized local LLM, ingesting nine public ATS APIs (Greenhouse, Lever, Ashby, Workday, and others) with tuned inference that keeps schema-constrained JSON generation stable on consumer GPU hardware.
- Enforces a structural no-fabrication guarantee: deterministic checks reject any generated claim not present in a verified profile.

CERTIFICATIONS & EDUCATION

Computer Programming & Analysis, Advanced Diploma — George Brown College (Sept 2021 – Apr 2024). **Dean's List, all terms.**
Coursework: Machine Learning, Data Structures & Algorithms, Full-Stack Development.

Contentful Certified Professional + Personalization Skill Badge (Oct 2025) — headless CMS content modeling and delivery.
